在远程服务器上部署snap并在本地可视化远程操作

最新服务器用户名和密码:

用户名: root

密码: 3wu74g9jniuo

端口: 30308

服务器已经安装好snap,需要在本地(windows)安装putty和Xming

Putty安装地址: https://www.chiark.greenend.org.uk/~sgtatham/putty/latest.html

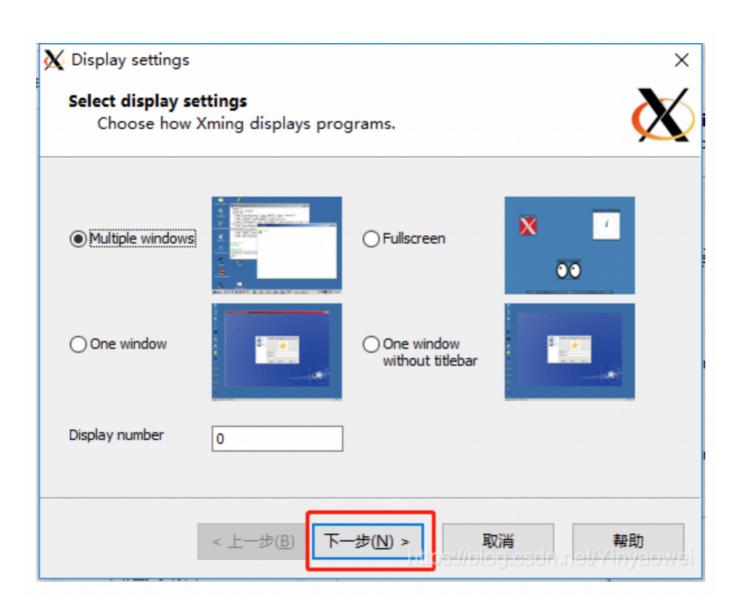

选择对应版本即可, 下载安装。

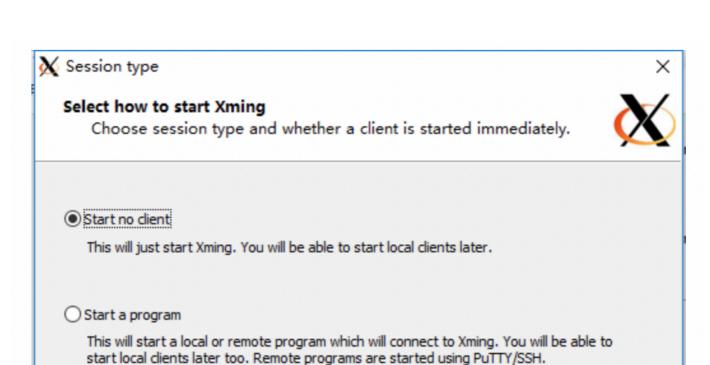

Xming安装地址: http://sourceforge.net/projects/xming/files/

安装后xming server自动运行,如果没有运行,通过桌面快捷菜单启动,按步骤安装即可。

安装完毕后, 打开XLaunch

在菜单栏最近添加可以找到XLaunch,点击打开即可。

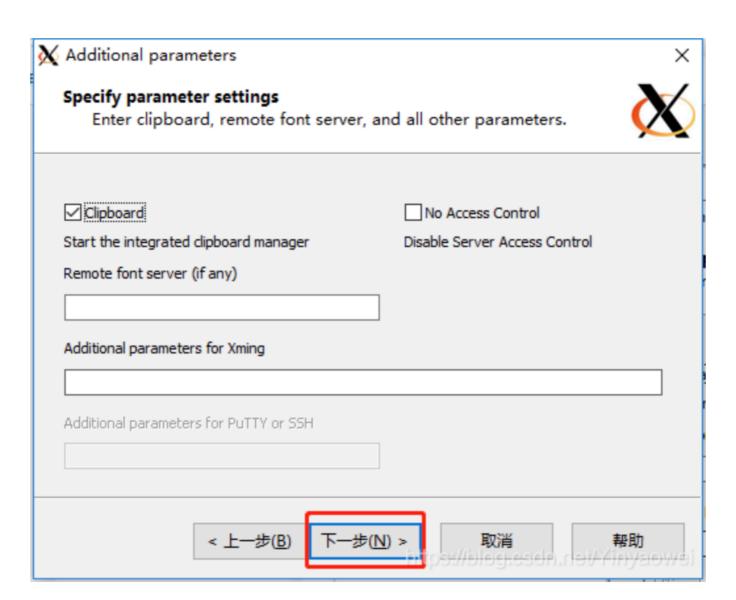

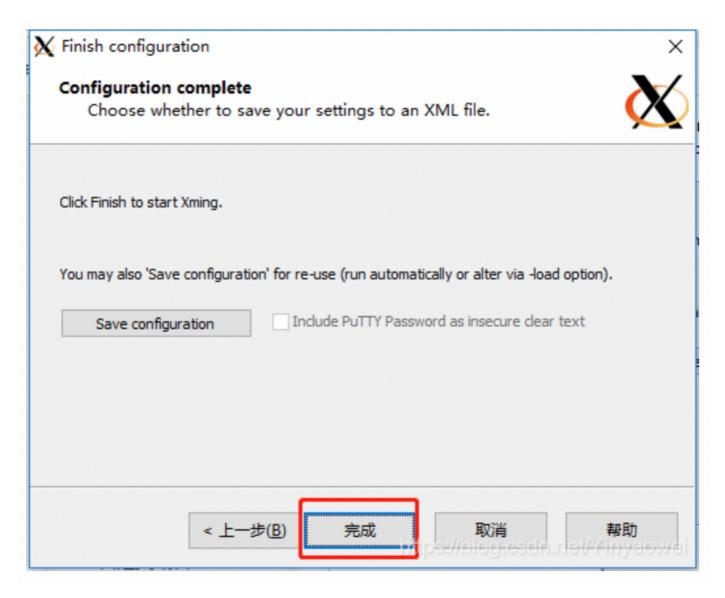

Open session via XDMCP

This will start a remote XDMCP session, Starting local clients later is limited. This option

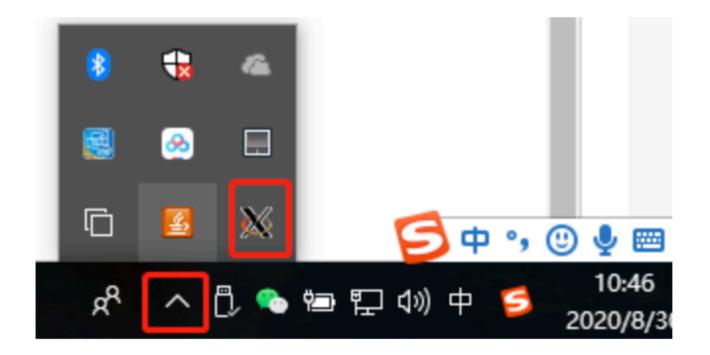

is not available with the "Multiple windows" mode.

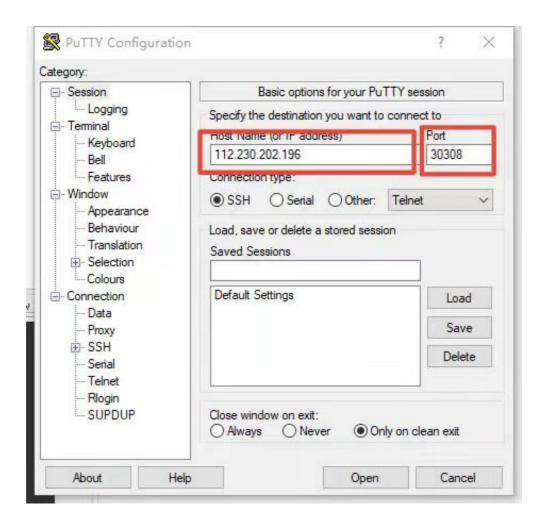

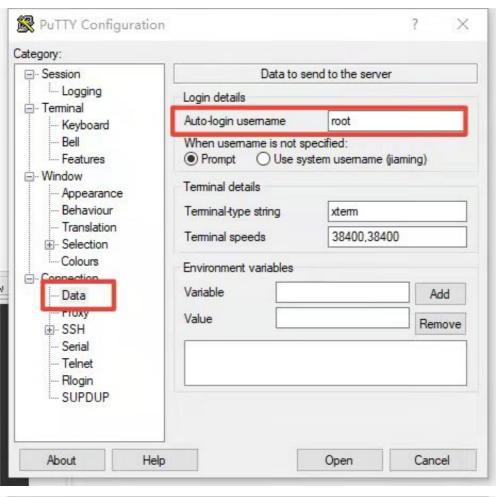

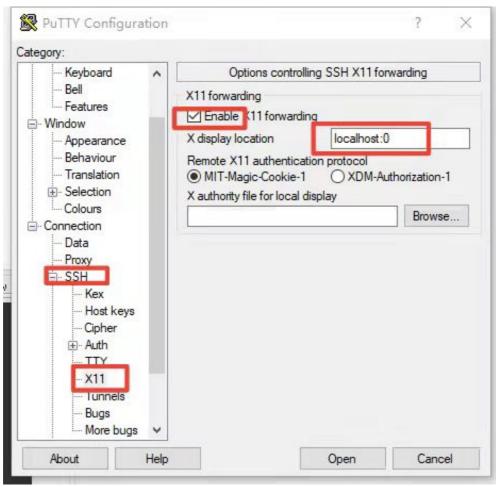

看到下方图标说明启动正确:

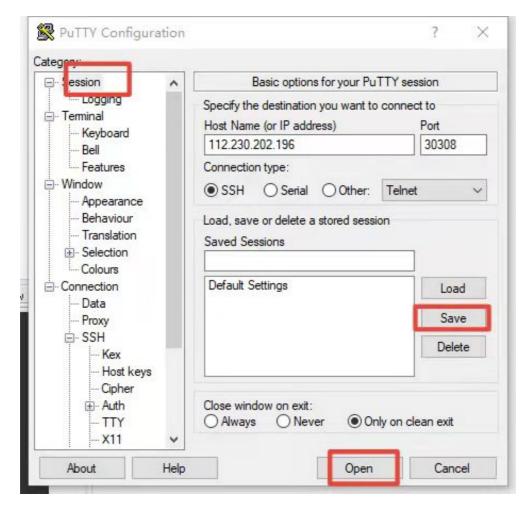

配置Putty:

配置完之后点击open即可打开终端。

进入终端后,配置DISPLAY环境变量:

在Putty终端输入: export DISPLAY="localhost:10.0"

接着输入: snap

运行正确Xming会显示snap可视化界面:
